

Summarizer Output

The project also has an encyclopedia article about itself, Wikipedia , and an introduction for aspiring contributors .[1] There are about 71,000 active contributors working on more than 47,000,000 articles in 299 languages .(See the statistics page for more information.)Contributions cannot damage Wikipedia because the software allows easy reversal of mistakes and many experienced editors are watching to help ensure that edits are cumulative improvements.Because everybody can help improve it, Wikipedia has become more comprehensive than any other encyclopedia.However, because anyone can click "edit" at any time and add stuff in, any article may contain undetected misinformation, errors, or vandalism .Wikipedia was founded as an offshoot of Nupedia , a now-abandoned project to produce a free encyclopedia, begun by the online media company Bomis .During 2000, Jimmy Wales (founder of Nupedia and co-founder of Bomis), and Larry Sanger , whom Wales had employed to work on the encyclopedia project, discussed ways of supplementing Nupedia with a more open, complementary project.Today, there are Wikipedias in over 250 languages.Some text has been imported only under CC-BY-SA and CC-BY-SA-compatible license and cannot be reused under GFDL; such text is identified either on the page footer, in the page history or on the discussion page of the article that utilizes the text.Every image has a description page that indicates the license under which it is released or, if it is non-free, the rationale under which it is used.(See content disclaimer for more information.)Text on Wikipedia is a collaborative work, and the efforts of individual contributors to a page are recorded in that page's history , which is publicly viewable.Information on the authorship of images and other media, such as sound files, can be found by clicking on the image itself or the nearby information icon to display the file page , which includes the author and source, where appropriate, along with other information.Over 5,000 articles have been designated by the Wikipedia community as featured articles , exemplifying the best articles in the encyclopedia.Wikipedia is available in languages other than English.Additional links can be easily made if a relevant link is missing—this is one simple way to contribute.Users should be aware that not all articles are of encyclopedic quality from the start: they may contain false or debatable information.In part, this is because editors often contribute content in which they have a particular interest and do not attempt to make each article that they edit comprehensive.Our best articles are called Featured Articles (and display a small star in the upper right corner of the article), and our second best tier of articles are designated Good Articles .However, this is a process and can take months or years to be achieved through the concerted effort of editors.Main page: Wikipedia is not paper (on Wikimedia Meta-Wiki) First is that it is not
